R. L. Parker, PhD, *IGPP, A-205, University of California, San Diego, La Jolla, California 92093, USA.*
P. G. Richards, PhD, *Lamont-Doherty Geological Observatory, Palisades, NY 10964, USA.*
H. Rishbeth, MA, PhD, ScD, *Appleton Laboratory, Ditton Park, Slough SL3 9JX.*

The *Geophysical Journal of the Royal Astronomical Society* accepts papers on all geophysical subjects; work on the upper atmosphere is included when it is associated with the Earth, as for example magnetic effects at the Earth due to upper atmosphere occurrences. Review articles are included, together with summaries of palaeomagnetic observations, letters to the editors and book reviews. Papers containing a high proportion of diagrams or tabular material, however, cannot be accepted, but may be published in *Geophysical Memoirs*.
Geophysical Journal is published on the first day of each month; three issues constitute a volume, so that there are four volumes each year. Subscribers receive automatically and without further charge current issues of *Geophysical Memoirs*, which appears irregularly.
The Royal Astronomical Society also publishes the *Quarterly Journal, Monthly Notices of the Royal Society* and *Memoirs*.
All the Society's journals are published by *Blackwell Scientific Publications Ltd, Osney Mead, Oxford OX2 0EL, UK.*
Subscription orders and all correspondence and remittances relating to subscriptions should be addressed to the publishers, with the exception of orders etc., from members of the Society, who should communicate direct with the General Secretary of the Society.
A list of subscription rates appears at the end of each volume.
Back numbers of volumes of *Geophysical Journal* published from 1958 to July 1965 (Volumes 1–9) should be ordered from the Society; orders for Volume 10 (September 1965) and following should be sent to the publishers.
This journal is covered by *Current Contents.*

Royal Astronomical Society

The interests of the Royal Astronomical Society cover the whole field of astronomy, geophysics and the solar-terrestrial environment. Members of the Society may buy *Geophysical Journal* and *Monthly Notices* at a reduced price. They also receive *Quarterly Journal* free of charge. In addition, members have the use of an extensive Astronomical and Geophysical library.
Enquiries concerning membership of the Society should be addressed to *The General Secretary, Royal Astronomical Society, Burlington House, London W1V 0NL, UK.*

SUBJECT INDEX

PAGE

Book Reviews 135, 277, 553

Earth's lithosphere

Structure of the continental margin of South-eastern Greenland, *P. S. Featherstone, M. H. P. Bott and J. H. Peacock* 15
Inversions of high-frequency $Q_\gamma^{-1}(f)$, *Paul W. Burton* 29
Fine structure of an Aleutian crustal section, *Donald V. Helmberger* 81
Thrust faulting and crust–upper mantle structure in East Australia, *Joseph M. Mills and Thomas J. Fitch* 351

Earth's mantle

Mineralogy and chemistry of the Earth's mantle above 1000 km, *Lin-gun Liu* 53
Lateral variation in the structure of the upper mantle beneath Eurasia, *P. C. England, M. H. Worthington and D. W. King* 71

Earthquakes

Seismic moment, source dimensions, and stresses associated with earthquakes in the Mediterranean and Middle East, *Robert G. North* 137
A static and dynamic finite element analysis of the 1971 San Fernando, California, earthquake, *D. W. McCowan, P. Glover and S. S. Alexander* 163
The balance of energy in earthquake faulting, *F. A. Dahlen* 239

Elastic wave theory

'Gravitating Earth flattening' approximations of propagators and Green matrices for body force and dislocation sources, *Georges Jobert* 123
Elastic wave propagation in model sediments – I, *K. Walton* 461
On the equations of elastodynamics, *J. A. Hudson* 521

Electromagnetic induction

Electromagnetic induction over the edge of a perfectly conducting ocean: the *H*-polarization case, *R. C. Bailey* 385
Solution of the *H*-polarization induction problem by a wavenumber integral equation approach, *K. Sørensen and L. Børsting Pedersen* 493

Explosion phenomena

A near-regional explosion source model for tuff, *William A. Peppin* 331

Geochemistry

Mineralogy and chemistry of the Earth's mantle above 1000 km, *Lin-gun Liu* 53

Gravity field, Earth

Three-dimensional statistical gravity disturbance model, *Janardan G. Negi and Vijay P. Dimri* 187
Depth of sources of gravity anomalies, *M. A. Khan* 197
Surface deformation, gravity anomalies and convection, *Dan McKenzie* 211
The influence of barometric-pressure variations on gravity, *Richard J. Warburton and John M. Goodkind* 281
On the gravitational potential and field anomalies due to thin mass layers, *J. R. Ockendon and D. L. Turcotte* 479

PAGE

Heat flow

Two heat flow values for Tasmania, *E. B. Wronski* 131
Geothermal measurements in Palaeogene, Cretaceous and Permo-Carboniferous sediments in northern Bohemia, *Vladimir Cermak* 537

Inverse problem

Positivity constraints in linear inverse problems – I. General theory, *P. C. Sabatier* 415
Positivity constraints in linear inverse problems – II. Applications, *P. C. Sabatier* 443

Magnetic field, Earth

Geomagnetic secular variations during the last 25 000 years: an interpretation of data obtained from rapidly deposited sediments, *Kenneth M. Creer* 91

Magnetic methods and surveys

The magnitude of the palaeomagnetic field: a new non-thermal, non-detrital method using Sun-dried bricks, *K. P. Games* 315
Comments on 'A least-squares method to find a remanence direction from converging remagnetization circles' by H. C. Halls, *P. L. McFadden* 549
Reply to P. L. McFadden's comments, *H. C. Halls* 551

Magnetic properties

Origin and stability of drilling induced remanence, *Russell F. Burmester* 1
Experiments relating to the measurement of inhomogeneous remanent magnetism in rock samples, *D. W. Collinson* 271

Oceanography

A sea-level recorder for tectonic studies, *Roger Bilham* 307

Palaeomagnetism

Origin and stability of drilling induced remanence, *Russell F. Burmester* 1
Geomagnetic secular variations during the last 25 000 years: an interpretation of data obtained from rapidly deposited sediments, *Kenneth M. Creer* 91
Palaeomagnetic results from the Borrowdale Volcanic Group, English Lake District, *A. M. Faller, J. C. Briden and W. A. Morris* 111
Further evidence for a strong intermediate state of the palaeomagnetic field, *J. Shaw* 263
Experiments relating to the measurement of inhomogeneous remanent magnetism in rock samples, *D. W. Collinson* 271
The magnitude of the palaeomagnetic field: a new non-thermal, non-detrital method using Sun-dried bricks, *K. P. Games* 315
Comments on 'A least-squares method to find a remanence direction from converging remagnetization circles' by H. C. Halls, *P. L. McFadden* 549
Reply to P. L. McFadden's comments, *H. C. Halls* 551

Seismic methods and surveys

Earth-strain observations made with the Cambridge laser strainmeter, *R. J. Beavan and N. R. Goulty* 293
Topographic, geologic and cavity effects on the harmonic content of tidal strain, *Dane Blair* 393
A long-range seismic profile in South-eastern Australia, *K. J. Muirhead, J. R. Cleary and D. M. Finlayson* 509

PAGE

Seismicity

Seismic moment, source dimensions, and stresses associated with earthquakes in the Mediterranean and Middle East, *Robert G. North* 137
Magnitude studies from ultra long-period records, *A. Prozorov, M. Shimshoni and L. Knopoff* 407

Seismology

Inversions of high-frequency $Q_\gamma^{-1}(f)$, *Paul W. Burton* 29
The travel of time of *P* seismic waves in Europe and Western Russia, *P. C. England and M. H. Worthington* 63
Fine structure of an Aleutian crustal section, *Donald V. Helmberger* 81
'Gravitating Earth flattening' approximations of propagators and Green matrices for body force and dislocation sources, *Georges Jobert* 123
A near-regional explosion source model for tuff, *William A. Peppin* 331
Magnitude studies from ultra long-period records, *A. Prozorov, M. Shimshoni and L. Knopoff* 407
Elastic wave propagation in model sediments – I, *K. Walton* 461
Generation of complete theoretical seismograms for *SH* – I, *Keith Nakanishi, Leon Knopoff and Fred Schwab* 525
Generation of complete theoretical seismograms for *SH* – II, *E. Mantovani, F. Schwab, H. Liao and L. Knopoff* 531
The effect on noise on seismograms, *R. G. Pearce and B. J. Barley* 543

Tectonics

Surface deformation, gravity anomalies and convection, *Dan McKenzie* 211
A sea-level recorder for tectonic studies, *Roger Bilham* 307
Thrust faulting and crust–upper mantle structure in East Australia, *Joseph M. Mills and Thomas J. Fitch* 351
